---

## Summary

Passionate and results-driven engineering student with hands-on experience in Python, C++, JAVA and system-level programming. Proficient in building and optimizing applications with a strong foundation in Data Structure and Algorithms. Seeking to leverage academic knowledge and practical experience to contribute to innovative software development in a professional environment.

## Work Experience

### AI & Automation Engineer | Sept 2024 – Aug 2025

*PenPixel LLP, Mumbai, India*

- Designed and deployed conversational interfaces transforming static client FAQ pages into digital assistants.
- Streamlined a core client's client-onboarding pipeline, reducing manual document routing and eliminating human errors across disparate apps.
- Implemented aggressive backend caching layers using Redis to store frequent model responses and session states.
- Established strict prompt-injection defence mechanisms and PII (Personally Identifiable Information) masking layers to ensure client data complied with enterprise privacy standards before hitting LLM endpoints.

### Software Engineer Intern | Dec 2023 – Sept 2024

*Eratronics, Navi Mumbai, India*

- Built and maintained automation scripts for both Windows and Linux platforms to streamline internal workflows and reduce manual operations.
- Led a 4-member team in developing a command-line SIP Protocol Tool for internal network operations, coordinating the full development lifecycle from design to delivery.
- Developed an SMS alert script and statistical alert application for a Perimeter Intrusion Detection System (PIDS), improving real-time incident response capability.
- Created an interactive SNMP-based network topology tool on Linux, enabling clearer visibility into network infrastructure.
- Designed an Arduino-based server cabinet climate monitor with a local software server for real-time environmental tracking.

### Technical Content Writer and Editor | Jan 2023 – Sept 2023

*PenPixel LLP, Mumbai, India*

- Researched and authored technical articles on software development, networking, and embedded systems for a range of developer-facing publications.
- Edited and reviewed technical drafts for clarity, accuracy, and consistency, ensuring content met publication standards.

## Key Projects

- Local Remote (Python):** Open-source application built in Python designed to provide an easy and efficient way to give remote access on local network in real-time.
- dirExp (Windows & Linux):** Terminal-based, cross-platform file explorer for seamless file management written in C++.

## Education

- MSc Software Development | University of Glasgow, UK | 2025 – Present**
- BTech in Electronics and Telecommunication | Pillai College of Engineering, India | 2020 – 2024**
